Aerospace Welding Minneapolis, Inc, announces the branding of its FAA PMA Aircraft exhaust components to the “Aero-Power™” brand name.

Burnsville, MN. -- “The ‘Aero-Power™’ name will provide our customers with a higher level of assurance of quality when buying exhaust parts,” says AWI President Tom Heid. AWI produces several different PMA mufflers for the most common Piper and Cessna aircraft. AWI is the world’s largest exhaust repair station, providing repair/exchange and overhauled units for almost all certified piston aircraft exhaust systems.

Backing up the “Aero-Power™” name is our assurance that each piece part is inspected to PMA drawing specifications and material certifications. Further, all welds will be triple inspected, once by the welder, once by the overall part fabricator, and then by a Quality Inspector. All parts are welded using Argon gas purge welding and each is pressure tested for added safety. We will continue to provide one-year, unlimited hours, warranty to our customers. Substantial Product Liability Insurance is carried by AWI; financially protecting our customers.

AWI has a Quality Assurance Staff of four, full-time quality professionals, lead by a FAA Designated Airworthiness Representative (DAR).

Aerospace Welding Minneapolis, Inc, has been repairing, overhauling and manufacturing piston engine aircraft exhaust and engine mounts for 13 years. Thousands of FAA PMA parts have been sold to satisfied customers as well as the repair of over 100,000 exhaust systems.
